

## Year 1 'Whatever the Weather' Spring 2019

In Literacy, we will link much of our learning to the weather. We will create weather reports, poetry and stories using what we have learned across the curriculum.

In Geography, we will be investigating countries and capitals of the United Kingdom, using simple maps. We will also spend time studying our local area and finding out about the features of the place we live in. This work will include local walks to the church and the woods.

In Design and Technology, we will be designing things that can be used to measure wind and rainfall.

As Scientists this term, we will be studying types of weather and looking at seasonal changes. We will also study plant life. We will go on a plant hunt and learn how to identify, classify and describe their basic structure. We will talk about how plant life is affected by the seasons.

As Artists, we will be studying famous artists such as Georgia O'Keeffe. We will look at her beautiful paintings of flowers and recreate our own. We will continue to practise our skills in painting and drawing.
